

**Dr Sam Rack**  
**BSc MBChB MRCP**

**Medical Oncology Research Fellow at The Christie NHS Foundation Trust**

Dr Sam Rack is a Medical Oncology Research Fellow at The Christie Hospital in Manchester, UK, with a special interest in rare cancers. His clinical practice focuses on the use of molecular profiling to guide targeted therapies for patients with cancers that lack standard treatment options.

Before studying medicine, Dr Rack completed an undergraduate degree in genetics, laying the foundation for his strong interest in the role of genomics in cancer care. He is currently undertaking a PhD investigating the immune microenvironment of salivary gland cancers, with the aim of identifying novel therapeutic approaches for these rare tumours.

Dr Rack is passionate about integrating advances in cancer genetics into everyday clinical practice to improve outcomes for patients, and he is delighted to be speaking at this Patient Education Day on the role of genetics in managing cancers.
