Dr John Tadross, Consultant Molecular Histopathologist

John Tadross is a Consultant Histopathologist and Solid Tumour Molecular Pathologist at Cambridge University Hospitals, Molecular Pathology Clinical Lead for East Genomics and Assistant Research Professor at the University of Cambridge.

His work brings together the microscopic examination of tumours and genomic testing to refine cancer diagnoses and identify potential treatment options. He also leads the CUH Human Research Tissue Bank, supporting research using donated human tissue. His interests in salivary gland cancer include the clinical value of whole-genome sequencing and other genomic tests, and improving access to testing for patients with these rare tumours.
